

**2020 regulations versus emissions intensity across food categories.** (A) 2020 direct regulations versus emissions intensity across food categories. (B) 2020 direct environmental regulations (that is, all regulations from Title 40 of the Code of Federal Regulations) versus emissions intensity. (C) 2020 total regulations using the additive approach, including direct and indirect) versus emissions intensity (D). 2020 total regulations using the weighted approach, including direct and indirect, versus emissions intensity. Low and high bars represent the 5 and 95 percentile emissions intensity of different food products respectively. Different shapes represent different meta-analysis sources. Emissions intensity is measured in kg of CO<sub>2</sub> equivalents per kg of product.
